Ssh Jar 64bit

The reason I need to use SSH to access my phone is because I have a program that will no longer be supported in iOS 7 and require me to update my program and for that to work, it needs to access my phone. I can only access my phone in iOS 7 from recovery mode, or from DFU mode. However if I use the physical key to enter recovery mode, it seems to keep me in DFU mode. the problem is that the program that I want to use to update my application and make it compatible with iOS 7, requires you to have access to the iOS simulator or physical iOS device. I have a MacBook Pro (Early 2015) running OS X El Capitan 10.11.6, and I'm using Apple's iPhone (6S) iOS 8.1.2 for testing and testing only. How can I access the iPhone (6S) from the MacBook Pro with these versions of the software? I have the free version of Ssh Jar and tested that from my MacBook Pro before I started looking for an answer. So I have a Macbook Pro running OS X El Capitan 10.11.6. I just got a brand new iPhone 6s, with iOS 8.1.2 on it. I'm trying to figure out if I can SSH to my phone and run a backup. I'm looking for a program/way that will let me SSH to my iPhone 6s from my Mac. I think I've read that you can use Ssh Jar and it will allow you to do so. Is there any better way to do this? If there is, please help. I'm a little out of ideas on this one. Can anybody help? UPDATE: I just got it all working, and I'll post what I did below so hopefully it can help someone. At first I wasn't able to get it to work, so I was looking up tutorials, and I found out that I needed to change my SSH Server Port to 22. I set my SSH Server port to 22 in the Ssh Jar's configuration, and it worked fine for me. I found a tutorial that stated that you would need to create a folder somewhere on the iPhone's directory structure to store the backup. I didn't know where to do that, so I looked around for an answer and I found this one. Anyways, this tutorial basically states you are supposed to add 82157476af
